

Estimated Number of Assessments Flagged by RSF Per Month			
DO	Low Estimate	Average	High Estimate
Berlin	0	2	5
Claremont	0	2	5
Concord	1	4	9
Conway	0	1	3
Keene	0	2	5
Laconia	0	2	5
Littleton	0	0	2
Manchester	3	8	14
Rochester	0	2	6
Seacoast	1	5	9
Southern	1	4	8
Southern Telework	0	2	5
Special Investigations	0	0	2
Statewide Assessment Team	0	2	5

Key Data Factors:

- In a given month on average it's expected that 34% - 50% of ***ALL*** assessments (includes AAs) statewide are eligible to be scored by RSF per our problem statement.
 - DOs do show high variance by month as well.
- The last few months have shown an uptick trend in the number of assessments that are eligible to be scored in RSF (Nov 18 – Jan 19). Coupled with all DOs now being active in the process, there's a higher chance of actionable work.
 - It's estimated that 95% of months, this figure is somewhere between 369-494 assessments per month.
- On any given day, 95% of the time anywhere between 0 – 35 assessments are newly applicable for scoring in RSF.
 - Looking at the data on a daily level shows more stable trends across time.
 - This past January did contain a few more outlier days than usual where more than 40 assessments were newly eligible to be flagged in RSF in a given day.
- Roughly looking at proportions, each DO's number of flagged assessments is proportional to the total number that are eligible to be flagged. This indicates that no single DO is really performing outside the norm for its own limits.
- Roughly 97% of the time, it's estimated that RSF will flag 0, 1, or 2 new assessments as high risk in a given day, with 1 being the most likely.
 - It's unlikely, though still very possible that we can experience roughly 5-10 assessments being newly flagged in a given day.
- In a given month, 95% of the time, it's estimated that we'll have between 26 – 50 assessments newly flagged in RSF statewide.
- Given variations in a given month between what's newly flagged in RSF and the sheer total number of new assessments in a given month, 95% of the time, anywhere between 2.5% - 5.2% of assessments statewide are flagged in RSF.
